

Generator Property Management Pty Ltd

ABN: 73 615 047 295

STATEMENT:

July 2025: Generator Property Management (GPM) is pleased to announce the commencement of PFAS remediation works at the former Munmorah Power Station site in partnership with SciDev Limited using their advanced FluorofIX™ treatment technology.

“This marks a significant step forward in our long-term environmental management of the site,” said GPM CEO David Wood.

“We’re proud to be applying cutting-edge, proven technology to address legacy PFAS contamination and continue our commitment to responsible site remediation,” added David.

FluorofIX™, developed by SciDev, is a best-practice solution specifically designed for the efficient removal and stabilisation of PFAS compounds. SciDev is a recognised leader in sustainable environmental solutions for water-intensive industries, and its expertise will be instrumental in delivering this important project.

A nine-month construction implementation phase will commence shortly, with works being conducted in accordance with EPA guidelines and requirements. The Munmorah Community Consultation Group (CCG) has been briefed on these developments as part of GPM's ongoing commitment to transparent communication with stakeholders.

GPM remains dedicated to responsible environmental management of the Munmorah Power Station site and will provide further updates to the community and the CCG as works progress.
